### DSDC accredited product

Dementia friendly door signs

#### Q Who is this product aimed at/designed for?

This product is designed for care homes that understand the need for dementia friendly products in addition to the importance of creating an atmosphere that feels like home.

#### Q What interested you in having your product accredited by DSDC for dementia design?

We believe in our product and we know so many others do too! We knew this was the next step in gaining some credibility and helping to get the word out to many more care homes around the UK.

#### Q Can you describe one aspect of this product which is designed to be dementia friendly?

Our dementia friendly door signs all maintain an LRV contrast greater than the recommended 70% minimum.

#### Q Has the DSDC product accreditation benefitted your organisation? If so, in what way?

Yes! We have had a few expos since being accredited by DSDC where many of the guests were very interested in our accreditation and it was a main point of credibility for our products.

#### Q What is the one question related to dementia design which you would like researchers to study?

We would love to see more products for care homes that meet all necessary dementia friendly requirements but help maintain a sense of 'home' and 'calmness' for the residents who live there. After all, a care home is just that, a home.
